Dr. Alice Moran
Department of Animal Pathology
Kentucky Agricultural Experiment Station
Lexington, Kentucky

Dear Dr. Moran:

Perhaps you will recall having sent me a group of cultures some weeks ago, under the label *S. abortus-equi*. I suspect there has been some mixup, as some of these cultures prove to be *S. abortus-bovis*, as confirmed by Dr. Edwards at Chamblee. He suspects also that some of the stock numbers correspond to some standard stocks of *S. abortus-bovis*.

If you could recheck the status of these cultures, it would save me a good deal of trouble in confirming them.

The two numbers which have been checked at Chamblee are 1966 and M66.

Yours sincerely,

Joshua Lederberg
Associate Professor of Genetics
